Tried to implement a skeleton code for the instructor page that allows them to visualize a summary of the score of each student based on the evaluation dimensions. This time I am using a token that allows only the instructor to have access to this route. Only a fetching (GET) route was needed for this since we are not storing anything.

Created a skeleton code for the detailed evaluation. When the teacher clicks on the name of a student It brings them to a page that shows the detailed dashboard page for the performance of the student. The code should fetch (GET) the score of each evaluation and also fetch any comments left by their peers.
