

Marchelino Habchi (40259668)

Contributions (Sprint 3):

- Developed the Front-End:

Built the user interface to ensure smooth navigation and functionality across different pages, focusing on a user-friendly layout and responsive design.

- Implemented User Login:

Enabled login functionality, allowing users to authenticate and access protected parts of the site. Integrated JWT tokens to manage user sessions.

- Connected Front-End to Back-End:

Established seamless communication between the frontend and backend, setting up API calls to fetch and update data as needed.

- Managed Page Navigation:

Set up routing and protected routes to control access based on user roles, ensuring that only authorized users can access specific sections of the site.

- Handled Backend Requests:

Configured front-end requests to interact with backend endpoints, allowing the frontend to dynamically display content based on user actions and responses from the server.
