Sprint 3 Individual Contribution

1. Code the frontend based on the mock-up design for the team visualization page. This consisted of improving the team visualization page for the instructor by adding the dimension fields for each team. That allowed the students score for each dimension to be shown and updated as the students evaluate them throughout the semester.
Time spent: 5 hours
2. Code the frontend based on the mock-up to allow the names of the students in a team clickable. And once you click on a student, this will bring the instructor to a detailed dashboard page on the performance of the student.
Time spent: 3 hours
3. Code the frontend based on the mock-up so a user will be able to logout from the system so that they can close the session
Time spent: 2 hours
4. Code the frontend based on the mock-up so the instructor will be able to export the teams created as a csv file so that they can manage the teams outside of the website.
Time spent: 3 hours
5. Meeting minutes. This is where we planned out future sprints by working on task breakdown and selecting which tasks to complete during the sprint. We also worked on implementation clarifications.
Time spent: 2 hours
