I worked on the connection from the back-end to the front-end of the team creation page that was created by another person. I added the header and the navigation bar. Before, I was using the environment on vs code, now I am using a docker which simplifies everything. I am also using Postman to test the data.

I continued to work on the connection, this time I focused more on storing the team name and team members to the backend. I've also implemented the connection between the frontend of student page and the backend so that they can see the team name and the other students that are part of the team. At the end, the connection for the team creation was completed
