Sprint 2 Individual Contribution

1. Coded the frontend based on the mockup design for the team modification feature. This consisted of allowing instructors to modify a team after it has been created, providing a delete / edit button that allows instructors to modify or remove a team that has been created, as well as allowing instructors to remove or add students to a team and save the changes.
   Time spent: 5 hours

2. Code the frontend based on the mockup for teammate selection for evaluation. This consisted of allowing students to select their own teammate to evaluate their performance anonymously as well as having to make sure students have access to a evaluate button that redirects them to the evaluation page where they can choose a specific teammate and start accessing their performance.
   Time spent: 2 hour

3. Code the frontend based on the mockup for the evaluation dimension visualization page. This consisted of allowing the instructors to visually see the score of each student based on the evaluation dimension so they can quickly assess their productivity and contribution to their own team.
   Time spent: 2 hour

4. Meeting minutes. This is where we planned out future sprints by working on task breakdown and selecting which tasks to complete during the sprint. We also worked on implementation clarifications.
   Time spent: 2 hours
